Introduction

Use this publication if your application includes the Kinetix® 5300 drive family and Kinetix TLP servo motors or any of the other compatible Allen-Bradley® motors. The 2198-K53CK-D15M feedback connector kit is available for use when Kinetix MP, TL, or TLY rotary motors and linear actuators are used with flying-lead feedback cables. For more Kinetix drive and motor information, see the Kinetix Motion Control Selection Guide, publication KNX-SG001, or Motion Analyzer software.

The purpose of this publication is to assist you in identifying the drive system components and accessory items that you need for your Kinetix 5300 drive and motor/actuator combination. Diagrams in this publication illustrate how many of the common drive accessory items are used in a typical system. See the Kinetix Servo Drives Specifications Technical Data, publication KNX-TD003, for detailed accessory descriptions and specifications.

Drive/motor system combinations also include the following:

- Motor/cable combinations table
- Drive and motor performance specifications table
- Torque/speed curves for each rotary motor and force/velocity curves for each linear device matched to the drive that provides optimum performance

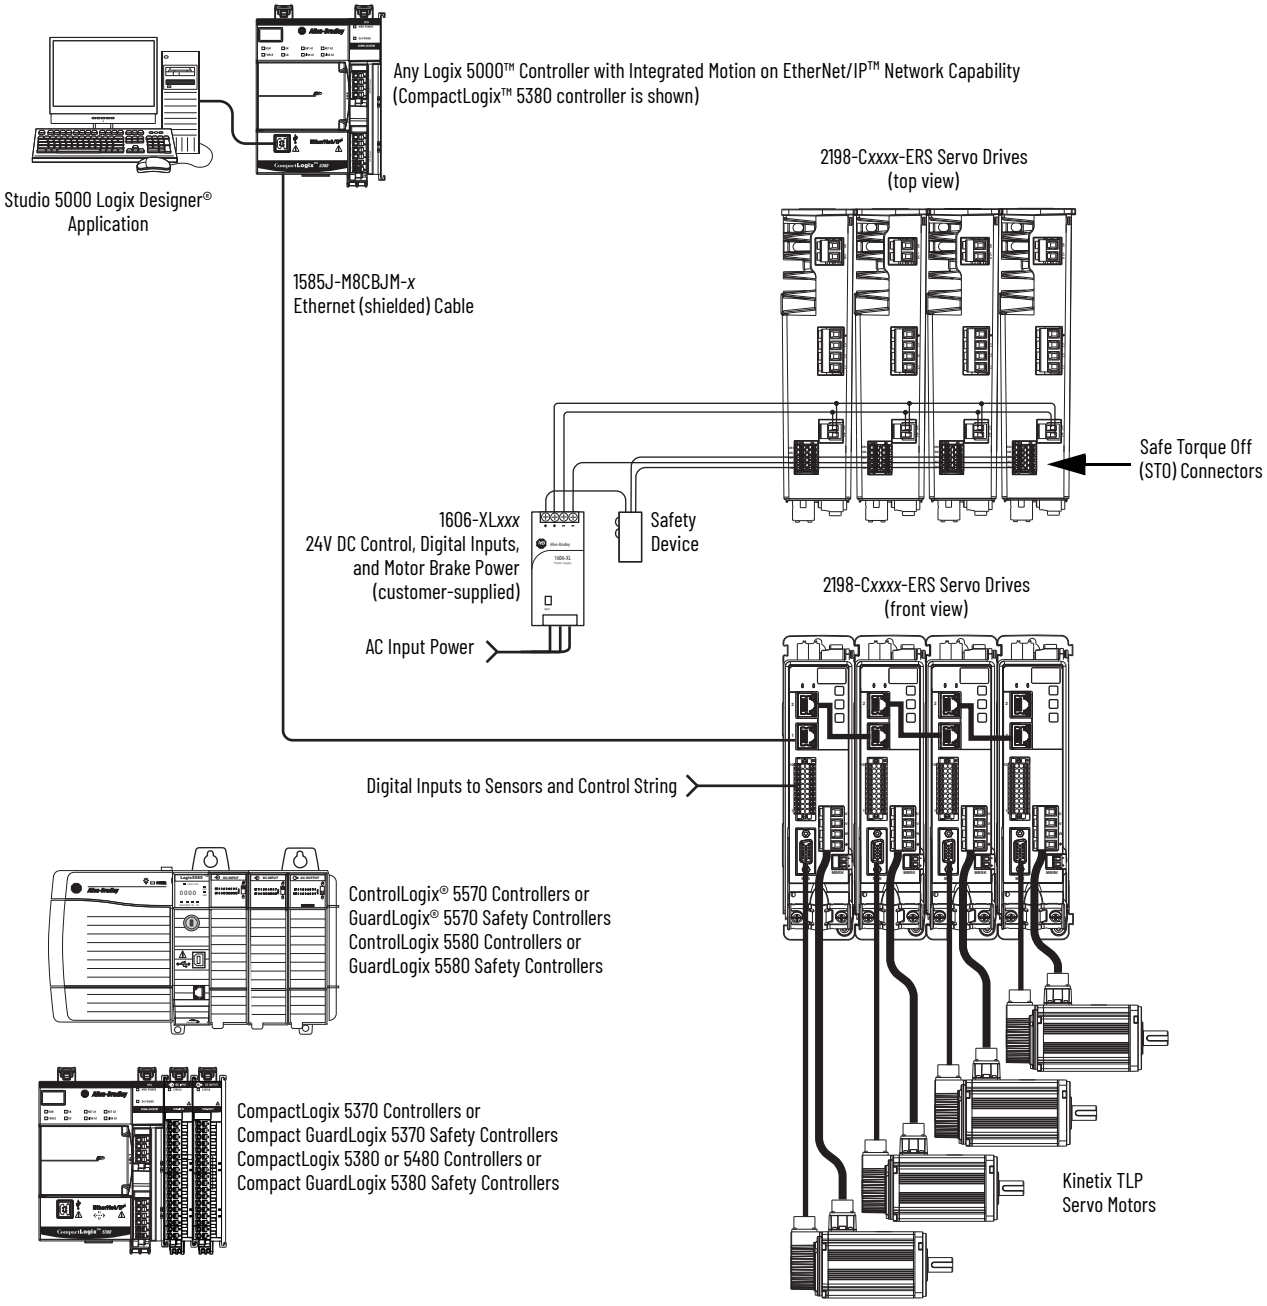
Performance specification data and curves reflect nominal system performance of a typical system with motor and drive at the rated ambient temperature and line voltage. For additional information on ambients, line conditions, and valid combinations that are not shown in this publication, refer to the Motion Analyzer system sizing and selection tool.

IMPORTANT These system combinations do not include all possible motor/drive combinations. See the Motion Analyzer system sizing and selection tool to verify compatibility. Access Motion Analyzer at https://motionanalyzer.rockwellautomation.com.

Hardwired Safety Configuration

Kinetix 5300 servo drives are capable of safe torque-off (STO) safety functions via hardwired connections. In this example, the safe torque-off (STO) connectors are wired to external safety devices with cascading hardwired safety-connections from one drive to another.

Hardwired Safe Torque-off



Determine What You Need

For each Kinetix 5300 drive system, the drive and motor/actuator catalog numbers are required to determine the motor power and feedback cable catalog numbers. A 24V DC power supply is also required for digital I/O circuitry, motor brake circuitry, and control power.

- For applications with Kinetix TLP servo motors, use 2090-CTFB-MxDD feedback cables with drive-end (D-sub) connector for direct connection to the Kinetix 5300 drive. If you build your own flying-lead cables, 2198-K53CK-D15M feedback connector kits are available.
- For applications with Kinetix MP motors/actuators, LDAT-Series linear thrusters, and LDC-Series™ / LDL-Series™ linear motors use 2090-CFBM7DD feedback cables with drive-end (D-sub) connector for direct connection to the Kinetix 5300 drive. The 2198-K53CK-D15M feedback connector kit is available for use with 2090-CFBM7DF flying-lead feedback cables.
- For applications with Kinetix TLY servo motors, use 2090-CFBM6DD feedback cables with drive-end (D-sub) connector for direct connection to the Kinetix 5300 drive when battery backup is not required. When battery backup is required, use 2198-K53CK-D15M connector kits with 2090-CFBM6DF flying-lead feedback cables.
- For applications with Kinetix TL servo motors, use 2090-DANFCT-S*xx* feedback cables and remove the drive-end connector. Use 2198-K53CK-D15M connector kits for making feedback connections and include a customer-supplied battery when battery-backup of position data is required.

Optional equipment includes the following:

- Bulletin 2198 AC line filters
- Bulletin 2097 or 2198 shunt resistors
- 24V DC shared-bus connector kits (does not support shared AC or shared DC-bus connector kits)

Example diagrams of the required and optional equipment are provided.

Motor feedback connections are made at the 15-pin motor feedback (MFB) connector. These examples illustrate how you can use the 2198-K53CK-D15M connector kit for making these connections. Auxiliary feedback connections are made at the 20-pin auxiliary feedback connector. Auxiliary feedback supports incremental (TTL) encoder types.

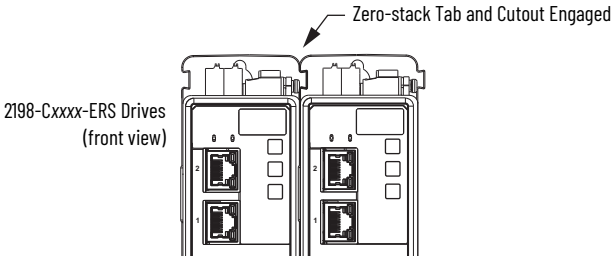
Kinetix 5300 24V Shared-bus System Examples

This system example illustrates how Kinetix 5300 servo drives and 24V shared-bus accessories are used in a typical configuration. In this example, frame 1 drives are used, so the shared-bus accessories are all catalog number 2198-H040-*x*-*x*.

Engaging the zero-stack tab and cutout from drive-to-drive makes efficient use of panel space for installations with multiple drives and is required for 24V shared-bus drive systems. This is done to make sure the drive connectors are spaced properly to accept the 24V shared-bus components.

Zero-stack Tab and Cutout Example



In this example, 24V control power is shared between three frame 1 servo drives (shared AC and shared DC-bus connector kits are not supported).

Kinetix 5300 (200V-class) Drives with Kinetix TLP Servo Motors

This section provides system combination information for the Kinetix 5300 drives (with 230V, nominal input) when matched with Kinetix TLP (200V-class) multi-purpose servo motors. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and optimum torque/speed curves.

These system performance tables and torque/speed curves reflect three-phase drive operation (230V, nominal input) with 200V-class motors. 2198-C1004-ERS, 2198-C1007-ERS, 2198-C1015-ERS, and 2198-C1020-ERS drives are capable of single-phase operation. Refer to Motion Analyzer software for single-phase performance specifications.

Kinetix 5300 (200V-class) Drives with Kinetix MPL Servo Motors

This section provides system combination information for the Kinetix 5300 drives (with 230V, nominal input) when matched with Kinetix MPL (200V-class) low-inertia servo motors with absolute high-resolution encoders or TTL incremental encoders. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and the optimum torque/speed curves.

These system performance tables and torque/speed curves reflect three-phase drive operation (230V, nominal input) with 200V-class motors. 2198-C1004-ERS, 2198-C1007-ERS, 2198-C1015-ERS, and 2198-C1020-ERS drives are capable of single-phase operation. Refer to Motion Analyzer software for single-phase performance specifications.

IMPORTANT The Kinetix MPL low-inertia motors on this page are equipped with DIN connectors (specified by 7, for example, MPL-A310P-*xx***7***x*AA) and are **not** compatible with cables designed for motors equipped with bayonet connectors (specified by 2, for example, MPL-A310P-*xx***2***x*AA). The motors with bayonet connectors are discontinued and require 2090-XXN*x*MP (bayonet) cables. For help with migration or to select bayonet transition cables, contact your Rockwell Automation sales representative.

Kinetix 5300 (400V-class) Drives with Kinetix MPL Servo Motors

This section provides system combination information for the Kinetix 5300 drives (with 400 and 480V, nominal input) when matched with Kinetix MPL (400V-class) low-inertia motors with absolute high-resolution encoders. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and the optimum torque/speed curves.

IMPORTANT The Kinetix MPL motors on this page are equipped with DIN connectors (specified by 7, for example, MPL-A310P-*xx***7***x*AA) and are **not** compatible with cables designed for motors equipped with bayonet connectors (specified by 2, for example, MPL-A310P-*xx***2***x*AA). The motors with bayonet connectors are discontinued and require 2090-XXN*x*MP (bayonet) cables. For help with migration or to select bayonet transition cables, contact your Rockwell Automation sales representative.

Kinetix 5300 (200V-class) Drives with Kinetix MPAS Linear Stages

This section provides system combination information for the Kinetix 5300 drives (with 230V, nominal input) when matched with Kinetix MPAS (400V-class) integrated (ballscrew) linear stages with absolute high-resolution encoders. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and the optimum force/velocity curves.

These system performance tables and torque/speed curves reflect single-phase and three-phase drive operation (230V, nominal input) with 200V-class motors; however, only 2198-C1004-ERS, 2198-C1007-ERS, 2198-C1015-ERS, and 2198-C1020-ERS drives are capable of single-phase operation.

Kinetix 5300 Drives with Kinetix MPAR Electric Cylinders

This section provides system combination information for the Kinetix 5300 drives (with 230V and 480V, nominal input) when matched with Kinetix MPAR electric cylinders. Included are motor power/brake and feedback cable catalog numbers, system performance specifications, and the optimum force/velocity curves.

These system performance tables and torque/speed curves reflect single-phase and three-phase drive operation (230V, nominal input) with 200V-class motors; however, only 2198-C1004-ERS, 2198-C1007-ERS, 2198-C1015-ERS, and 2198-C1020-ERS drives are capable of single-phase operation.

Kinetix 5300 (200V-class) Drives with LDC-Series Linear Motors

This section provides system combination information for the Kinetix 5300 (200V-class) drives when matched with LDC-Series iron-core linear motors. Included are power and feedback cable catalog numbers, system performance specifications, and the optimum force/velocity curves.

These system performance tables and torque/speed curves reflect single-phase and three-phase drive operation (230V, nominal input) with 200V-class motors; however, only 2198-C1004-ERS, 2198-C1007-ERS, 2198-C1015-ERS, and 2198-C1020-ERS drives are capable of single-phase operation.

(1) Values represent the range between no cooling (low value) and water cooling (high value).
(2) Drives selected are for motors with no cooling. System current, force, and power ratings can be limited by the drive for air and water cooled motors. In those situations, use a higher power drive to achieve full-system ratings for air and water cooled motors.
(3) Rated peak stall-torque is specified with three-phase operation. To achieve rated peak stall-torque performance with single-phase operation, use a catalog number 2198-C1020-ERS.

Performance specification data and curves reflect nominal system performance of a typical system with motor ambient at 40 °C (104 °F), drive ambient at 50 °C (122 °F), and rated line voltage. For additional information on ambient and line conditions, refer to Motion Analyzer software.
